3270

Type 8611 Compact PI Controller

Type 3270 is a direct-acting and general purpose motor valve for shut-off, used as regulating unit in control loops. A linear stepper motor as actuator drives the valve, which comes in a compact and robust housing. Analogue input signals are processed by the integrated control electronics. Due to an elastomeric seat seal the valve closes tight up to the DN specific nominal pressure (see ordering chart on p. 4). In case of power failure, the actual valve position will be kept. The motor's power consumption in opened or closed position is nearly zero. Only during valve switching does the motor need power. This key feature can reduce the energy consumption of a plant dramatically and thus make it more efficient.

Circuit function

2-way valve, motor driven, remains in position without further electrical power

Teeninear auta				
Materials				
Body	Brass or stainless steel			
Housing	PC (Polycarbonate), PPS (Polyphenylene sulfide)			
Seals	FKM or NBR, others on request			
Medium	Neutral gases, liquids			
Pressure Range ¹⁾	0 to 6 bar			
Closure time	2.5 s (0 to 100% stroke)			
Fluid temperature	0 to +70 °C			
Ambient temperature	-10 to +60 °C			
Viscosity	Max. 600 mm ² /s (cSt)			
Power supply	24 V DC ± 10% (max. residual ripple 10%)			
Power consumption	Max. 8 W (depending on motor control),			
	<1 W in holding position			
Duty cycle	Up to 100 % (depending on fluid and ambient			
	temperature)			
Port connection	G 1/4, G 3/8, NPT 1/4, NPT 3/8			
Electrical connection	M12 connector, 8-pin, male			
Input signal	Binary signal, PNP, 0-5V (log. 0, valve closed) or 10-30			
	(log. 1, valve open)			
Output signal	Load capacity 10-30V, PNP, max. 100mA			
	(Output signal active, if valve is closed)			
Protection class - valve	IP 50			
Installation	As required, preferably with actuator upright			
Status of LED	White: Normal operation and powered,			
	Yellow: Valve opened,			
	Green: Valve closed,			
	Red: Failure			
Dimensions	See drawings on page 4			
Weight	~0.7 kg			

¹⁾ Pressure data [bar]: Overpressure with respect to atmospheric pressure

- Seat valve with stepper motor actuator isolated from flow path
- Low power consumption

2/2-Way Motor Valve

Fast response

Technical data

- Orifice sizes 2 to 6 mm
- Port connection 1/4" and 3/8"

Duty Cycle Derating Curve

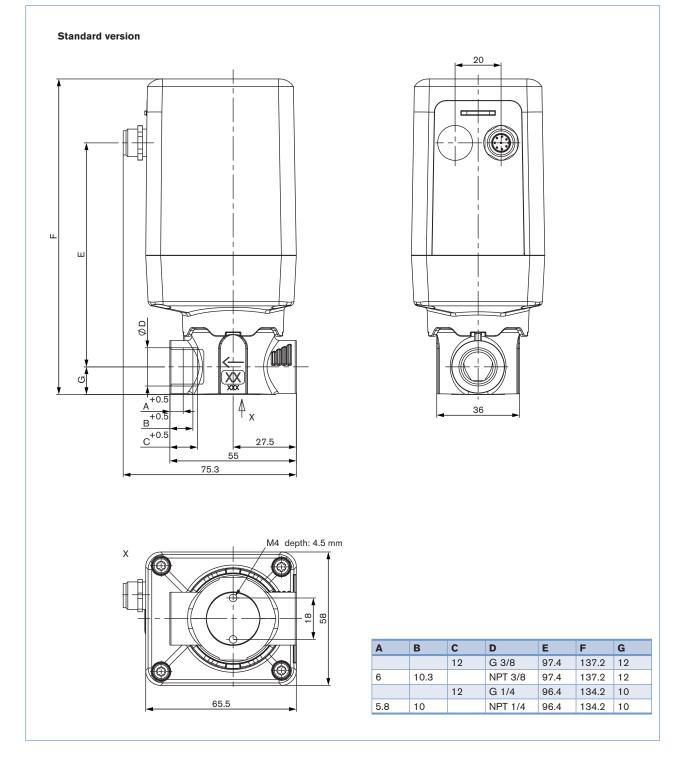

For motor valves it is essential to know the duty cycle during operation. Self-heating of the motor limits the maximum duty cycle. High ambient temperatures amplify the risk of damage due to overheating. The diagram below shows the suggested duty cycles dependent on the ambient temperature. Running the motor valve in the power saving mode (lower actuator force) allows higher duty cycles. The motor is optimized for the valve function regarding dimensions, power consumption and costs.

Note: Operating the valve beyond the suggested duty cycles leads to a drastically reduced lifetime of the valve.
