Semi Automatic Piston Fillers & Depositors

REB has developed a complete line of semi automatic volumetric piston fillers and depositors, ranging from a single cylinder to multiple cylinder systems.

Our three standard models of semi automatic machines, the SVS-J, SVS and DVS can be modified to meet your specific application. Our semi automatic fillers are pneumatically powered.

They can be activated by a foot pedal (in manual mode,) or they can run continuously in automatic mode.

All product contact parts are stainless steel or food grade plastics.

For convenience, the fillers have piston stroke adjustment scales for accurately setting the fill volumes.

Each machine comes complete with one product cylinder, one nozzle and a product hopper.

SVS-J & SVS Piston Filler Principle

Piston Filler: Model SVS-J

The SVS-J is our smallest piston filler, with a base of 19.5" by 9.5" and weighing approximately 35 LB.

Interchangeable product cylinders range in size from .25 inches to 2 inches in diameter with a fill range from .2 to 8.5 fluid ounces.

The SVS-J works well for lab use, start-up operation or small batch runs.

The SVS-J has also been mounted on vertical and horizontal form-fill-seal machines.

The SVS-J is used in many applications in the cosmetic, personal care and food industries.
