

BRIDGE

HD Con-Vey Cuber

Bridge Machine Heavy Duty Con-Vey Cubers are designed to heavily tenderize or "macerate" large pieces of meat. The unit features large diameter blades that are independently air-spring loaded with adjustable stops to allow for different cutting options. The air-spring loaded blade action allows you to run different size pieces through the Cuber at the same time and maintain a consistent depth of cut.

The Bridge Heavy Duty Con-Vey Cuber features stainless steel construction. The simple inline design allows for a continuous flow of product through the machine. The adjustable legs make it easy to align this machine with both new and existing processing lines.
