

Modular structure of an ECO-Line swivel foot

Technical Information

Application:

ECO-Line swivel feet are of modular construction. The components can be individually combined depending on the application. However, the threaded spindle is not screwed in but pressed permanently in. Swivel feet are used on machinery and installations and even on office furniture.

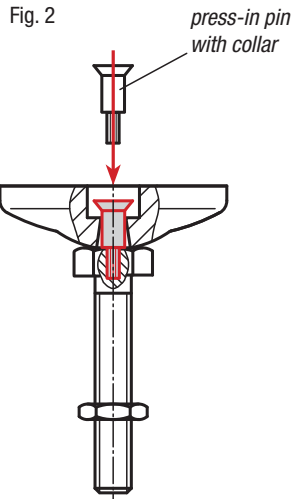

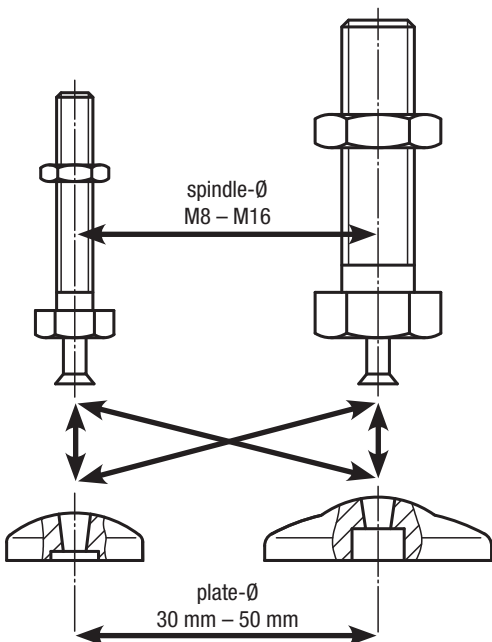

Modular construction:

Swivel feet comprise of two components: a plate and a threaded spindle. Any plate can be combined with any threaded spindle (see Fig 1).

Assembly:

Place the swivel foot plate on the threaded spindle and press the pin in to the collar (no accidental detaching of the spindle from the plate possible).
