Description

Product description:

TERMOFLUID LMI is a synthetic lubricant liquid that can be used as a "food-compatible oil" in food technology, but also as "needle and lifter oil" in the textile industry. It has NSF/H1 approval and is approved for contact with foodstuffs. NSF/H1 registration No.: 053684.

Application:

For all lubrication and friction points in the food, beverage and cosmetic industries, as well as in dental technology. As a separating and lubricating agent in baked goods production. Needles, lifters and guide bars for knitting and plaiting machines in the textile field.
