

Shotblast Facility

Case Study

Project Location United Kingdom

Sector Metalworking

Equipment Description OptiFlo 4RC80

Our clients goal was to provide ventilation and filtration of air from a shotblast facility.

AAF supplied a complete OptiFlo system with abrasion resistant inlets, exhaust fan and connecting ductwork incorporating a Winter/Summer change over damper.

Outcome: The system successfully provided the necessary local exhaust ventilation and by utilising a Winter/Summer change over damper, was able to return cleaned air to the booth reducing the operators overall heating bill, saving the customer money.
