Case Study

Project Location

Dundalk, Ireland

Sector

Beverage

Equipment Description

RotoClone W Size 10 complete with spool piece and elbow outlet.

Our clients goal was to remove the fumes from a coffee roasting facility.

AAF supplied the RotoClone mounted indoors, high up on the wall with a spool piece leading to an elbow outlet. This was then mounted outdoors for the chimney to run up to the roof. See pictures to the right.

Outcome: The unit dramatically reduced the roaster emissions, whilst at the same time, preventing the transfer of fires which are a regular occurrence within the coffee roaster. The system was also able to dramatically reduce its operating cost by utilising accumulated rain water as the scrubbing medium.
